"Training made in Germany"

TOOLS FOR LIFE will support a new project in India. Together with Friedrich Zenkner from SkillBuilder India, in 2012 we will start to develop a special training program "Made in Germany" for young Indian plumbers. Germany has a very successful dual training model. This success is due to the quality of the instructors. And this is the kind of German expertise TOOLS FOR LIFE together with the ROTHENBERGER Group would like to share with India. In the Bangalore based training center young plumbers will get a professional and German focused plumbing training. As this project will start in 2012, we are still looking for volunteers who might help us in developing such a training program for the Indian market. If you have any ideas or are interested in helping, please contact Sandra.Rothenberger@toolsforlife-foundation.com

New water cistern project in Chonyonyo/Tanzania

Due to a successful cooperation with our partner organization Engineer without Borders in Kagera/ Tanzania where we built 18 Water tanks for approximately 1,500 people, the TOOLS FOR LIFE Foundation decided to support another water cistern project in Chonyonyo/Tanzania. The idea is to build seven 20,000 l water tanks for 28 families in three months. Family members are helping from the beginning to plan, build and maintain this important water source.
